M2 Data, Knowledge and Hybrid AI · Université Paris-Saclay

I am a Master's student in Computer Science with a strong interest in languages, graphs and knowledge. After a three-year apprenticeship in industry, completed in 2026, I chose to move into research, with the goal of pursuing a PhD in hybrid symbolic and probabilistic AI.

Research Experience

2026 ○ **Jožef Stefan Institute**, Knowledge Laboratory, Ljubljana, Slovenia.
Research internship in NLP (June – August 2026): benchmark of open-source LLMs for readability assessment in English and Slovenian, studying explicit reasoning and few-shot prompting against classical formulas and supervised baselines.

Publications

2026 ○ **R. Thieffry** and M. Martinc. *Assessing Readability with LLMs: The Role of Reasoning and Few-Shot Prompting*. Preprint, arXiv:2609.24650, 2026. Submitted to ECIR 2027, under review.

Education

2026 – 2027 ○ **M2 Data, Knowledge and Hybrid Artificial Intelligence (DKAI), Université Paris-Saclay**, Orsay, France.
Courses include: From Symbolic to Neurosymbolic AI, Knowledge Discovery in Graph Data, Towards Hybrid and Explainable AI. See : M2 DKAI.

2023 – 2026 ○ **Engineering degree in Computer Science, Polytech Paris-Saclay**, apprenticeship track, Orsay, France.
Master's level degree (300 ECTS), average 17/20. Relevant courses (/20): Algorithmics (20), Data Science (19.5), Graph Algorithms (18.3), Machine Learning (18.6), AI (17.8), NLP (17). Tutored lower-year students in difficulty, at the request of the teaching staff.

2021 – 2023 ○ **Double degree in Computer Science and Mathematics, Université Paris-Saclay**, Orsay, France. Average 16.7/20 (L1), 16.3/20 (L2). See : LDDIM 1 and LDDIM 2.

2021 ○ **Baccalauréat général**, Mathematics and Physics-Chemistry, Advanced Mathematics option.

Professional Experience

2023 – 2026 ○ **MBDA France**, IT department.
Three-year apprenticeship (completed in 2026) as an infrastructure, Linux and containerization engineer. Projects: an **infrastructure management tool** (CMDB) for the company's Linux servers, and a **data mining** project using graph representations of ticket descriptions to classify issues and detect recurrent complaints.

Personal Projects

since 2025 ○ **Home lab**: setting up a GPU server (8× NVIDIA V100, installation planned for late October 2026) for local LLM experiments, together with a 3-node Kubernetes cluster.

Skills and interests

Languages ○ French (native), **English** (TOEIC 975/990, C1), **Japanese** (estimated JLPT N4, one of my hobbies), Chinese (one year).

AI & Data ○ Machine learning, NLP, LLMs (prompting, evaluation), knowledge graphs and Semantic Web (RDF, OWL, SPARQL), data mining

Coding ○ Python, Java, C++, OCaml, JavaScript, PHP, Bash, SQL, LaTeX

Tools ○ Git, Docker, Kubernetes, Ansible, Nginx, MySQL, Dataiku

Misc. ○ Deeply in love with computer science. I also like cooking and contemporary art.
